ch1_phase1_MDTONOTEBOOK

September 30, 2020

[1]:
```
from sympy import Matrix, Symbol, derive_by_array, Lambda, symbols, Derivative, diff
from sympy.abc import x, y, i, j, a, b
```

Defining variable-element matrices $X \in \mathbb{R}^{n\times m}$ and $W \in \mathbb{R}^{m\times p}$:

[2]:
```
def var(letter: str, i: int, j: int) -> Symbol:
    letter_ij = Symbol('{}_{}{}'.format(letter, i+1, j+1), is_commutative=True)
    return letter_ij

n,m,p = 3,3,2

X = Matrix(n, m, lambda i,j : var('x', i, j)); X
```

[2]:

$$\begin{bmatrix} x_{11} & x_{12} & x_{13} \\ x_{21} & x_{22} & x_{23} \\ x_{31} & x_{32} & x_{33} \end{bmatrix}$$

[3]:
```
W = Matrix(m, p, lambda i,j : var('w', i, j)); W
```

[3]:

$$\begin{bmatrix} w_{11} & w_{12} \\ w_{21} & w_{22} \\ w_{31} & w_{32} \end{bmatrix}$$

Defining $N = \nu(X, W) = X \times W$

- $\nu : \mathbb{R}^{(n\times m)\times(m\times p)} \to \mathbb{R}^{n\times p}$
- $N \in \mathbb{R}^{n\times p}$

[4]:
```
v = Lambda((a,b), a*b); v
```

[4]:

$$((a, \ b) \mapsto ab)$$

[5]:
```
N = v(X, W); N
```

[5]:

$$\begin{bmatrix} w_{11}x_{11} + w_{21}x_{12} + w_{31}x_{13} & w_{12}x_{11} + w_{22}x_{12} + w_{32}x_{13} \\ w_{11}x_{21} + w_{21}x_{22} + w_{31}x_{23} & w_{12}x_{21} + w_{22}x_{22} + w_{32}x_{23} \\ w_{11}x_{31} + w_{21}x_{32} + w_{31}x_{33} & w_{12}x_{31} + w_{22}x_{32} + w_{32}x_{33} \end{bmatrix}$$

Defining $S = \sigma_{\texttt{apply}}(N) = \sigma_{\texttt{apply}}(\nu(X, W)) = \sigma_{\texttt{apply}}(X \times W) = \Big\{\sigma(XW_{ij})\Big\}$.

Assume that $\sigma_{\text{apply}} : \mathbb{R}^{n\times p} \to \mathbb{R}^{n\times p}$ while $\sigma : \mathbb{R} \to \mathbb{R}$, so the function σ_{apply} takes in a matrix and returns a matrix while the simple σ acts on the individual elements $N_{ij} = XW_{ij}$ in the matrix argument N of σ_{apply}.

- $\sigma : \mathbb{R} \to \mathbb{R}$
- $\sigma_{\text{apply}} : \mathbb{R}^{n\times p} \to \mathbb{R}^{n\times p}$
- $S \in \mathbb{R}^{n\times p}$

[6]:
```
from sympy import Function

# Nvec = Symbol('N', commutative=False)

sigma = Function('sigma')
sigma(N[0,0])
```

[6]:

$$\sigma(w_{11}x_{11} + w_{21}x_{12} + w_{31}x_{13})$$

[7]:
```
# way 1 of declaring S
S = N.applyfunc(sigma); S
#type(S)
#Matrix(3, 2, lambda i, j: sigma(N[i,j]))
```

[7]:

$$\begin{bmatrix} \sigma(w_{11}x_{11} + w_{21}x_{12} + w_{31}x_{13}) & \sigma(w_{12}x_{11} + w_{22}x_{12} + w_{32}x_{13}) \\ \sigma(w_{11}x_{21} + w_{21}x_{22} + w_{31}x_{23}) & \sigma(w_{12}x_{21} + w_{22}x_{22} + w_{32}x_{23}) \\ \sigma(w_{11}x_{31} + w_{21}x_{32} + w_{31}x_{33}) & \sigma(w_{12}x_{31} + w_{22}x_{32} + w_{32}x_{33}) \end{bmatrix}$$

[8]:
```
# way 2 of declaring S (better way)
sigmaApply = lambda matrix:  matrix.applyfunc(sigma)

sigmaApply(N)
```

[8]:

$$\begin{bmatrix} \sigma(w_{11}x_{11} + w_{21}x_{12} + w_{31}x_{13}) & \sigma(w_{12}x_{11} + w_{22}x_{12} + w_{32}x_{13}) \\ \sigma(w_{11}x_{21} + w_{21}x_{22} + w_{31}x_{23}) & \sigma(w_{12}x_{21} + w_{22}x_{22} + w_{32}x_{23}) \\ \sigma(w_{11}x_{31} + w_{21}x_{32} + w_{31}x_{33}) & \sigma(w_{12}x_{31} + w_{22}x_{32} + w_{32}x_{33}) \end{bmatrix}$$

[9]:
```
sigmaApply(X**2) # can apply this function to any matrix argument.
```

[9]:

$$\begin{bmatrix} \sigma(x_{11}^2 + x_{12}x_{21} + x_{13}x_{31}) & \sigma(x_{11}x_{12} + x_{12}x_{22} + x_{13}x_{32}) & \sigma(x_{11}x_{13} + x_{12}x_{23} + x_{13}x_{33}) \\ \sigma(x_{11}x_{21} + x_{21}x_{22} + x_{23}x_{31}) & \sigma(x_{12}x_{21} + x_{22}^2 + x_{23}x_{32}) & \sigma(x_{13}x_{21} + x_{22}x_{23} + x_{23}x_{33}) \\ \sigma(x_{11}x_{31} + x_{21}x_{32} + x_{31}x_{33}) & \sigma(x_{12}x_{31} + x_{22}x_{32} + x_{32}x_{33}) & \sigma(x_{13}x_{31} + x_{23}x_{32} + x_{33}^2) \end{bmatrix}$$

[10]:
```
S = sigmaApply(v(X,W)) # composing
S
```

[10]:

$$\begin{bmatrix} \sigma(w_{11}x_{11} + w_{21}x_{12} + w_{31}x_{13}) & \sigma(w_{12}x_{11} + w_{22}x_{12} + w_{32}x_{13}) \\ \sigma(w_{11}x_{21} + w_{21}x_{22} + w_{31}x_{23}) & \sigma(w_{12}x_{21} + w_{22}x_{22} + w_{32}x_{23}) \\ \sigma(w_{11}x_{31} + w_{21}x_{32} + w_{31}x_{33}) & \sigma(w_{12}x_{31} + w_{22}x_{32} + w_{32}x_{33}) \end{bmatrix}$$

Defining $L = \Lambda(S) = \Lambda(\sigma_{\text{apply}}(\nu(X,W))) = \Lambda\left(\left\{\sigma(XW_{ij})\right\}\right)$. In general, let the function be defined as:

$$
\begin{aligned}
L &= \Lambda \begin{pmatrix} \sigma(XW_{11}) & \sigma(XW_{12}) & ... & \sigma(XW_{1p}) \\ \sigma(XW_{21}) & \sigma(XW_{22}) & ... & \sigma(XW_{2p}) \\ \vdots & \vdots & & \vdots \\ \sigma(XW_{n1}) & \sigma(XW_{n2}) & ... & \sigma(XW_{np}) \end{pmatrix} \\
&= \sum_{i=1}^{p} \sum_{j=1}^{n} \sigma(XW_{ij}) \\
&= \sigma(XW_{11}) + \sigma XW_{12} + ... + \sigma(XW_{np})
\end{aligned}
$$

NOTE HERE: * $\Lambda : \mathbb{R}^{n \times p} \to \mathbb{R}$ * $L \in \mathbb{R}$

[11]:
```
lambdaF = lambda matrix : sum(matrix)
lambdaF(S)
```

[11]:

$\sigma(w_{11}x_{11} + w_{21}x_{12} + w_{31}x_{13}) + \sigma(w_{11}x_{21} + w_{21}x_{22} + w_{31}x_{23}) + \sigma(w_{11}x_{31} + w_{21}x_{32} + w_{31}x_{33}) + \sigma(w_{12}x_{11} + w_{22}x_{12} + w_{32}x_{13}) + \sigma(w_{12}x_{21} + w_{22}x_{22} + w_{32}x_{23}) + \sigma(w_{12}x_{31} + w_{22}x_{32} + w_{32}x_{33})$

[12]:
```
L = lambdaF(sigmaApply(v(X, W)))
L
#L = lambda mat1, mat2: lambdaF(sigmaApply(v(mat1, mat2)))
#L(X, W)
```

[12]:

$\sigma(w_{11}x_{11} + w_{21}x_{12} + w_{31}x_{13}) + \sigma(w_{11}x_{21} + w_{21}x_{22} + w_{31}x_{23}) + \sigma(w_{11}x_{31} + w_{21}x_{32} + w_{31}x_{33}) + \sigma(w_{12}x_{11} + w_{22}x_{12} + w_{32}x_{13}) + \sigma(w_{12}x_{21} + w_{22}x_{22} + w_{32}x_{23}) + \sigma(w_{12}x_{31} + w_{22}x_{32} + w_{32}x_{33})$

[13]:
```
#derive_by_array(L, X)
```

[14]:
```
derive_by_array(L, S)
```

[14]:

$$\begin{bmatrix} 1 & 1 \\ 1 & 1 \\ 1 & 1 \end{bmatrix}$$

[15]:
```
from sympy import sympify, lambdify
n = lambdify((X[0,0],X[0,1],X[0,2],W[0,0],W[1,0],W[2,0]), N[0,0])
n(1,2,3,4,3,2)
```

[15]: 16

[16]:
```
f = Function('f') #(sympify(N[0,0]))
f(N[0,0])
```

[16]:

$f(w_{11}x_{11} + w_{21}x_{12} + w_{31}x_{13})$

[17]:
```
f(N[0,0]).diff(X[0,0])
```

[17]:

$w_{11} \frac{d}{d\xi_1} f(\xi_1)\Big|_{\xi_1 = w_{11}x_{11} + w_{21}x_{12} + w_{31}x_{13}}$

[18]:
```
n = v(X,W); n
n11 = Function('{}'.format(n[0,0]))
```

```
n11
```

[18]: w_11*x_11 + w_21*x_12 + w_31*x_13

[19]:
```
s_ij = Function('s_ij')
sig = Function('sig')(x)
```

[20]:
```
# KEY: got not expecting UndefinedFunction error again here too
#S_ij = Matrix(3, 2, lambda i,j: Function('s_{}{}'.format(i+1,j+1))(Function('{}'.format(N[i,j]))))
```

[21]:
```
#S_ij[0,0](sympify(N[0,0])).diff(sympify(N[0,0]))
F = 3*x*y

xy = Symbol('{}'.format(F))
xy.subs({x:3})
sympify(xy).subs({x:3})
```

[21]:

$$3 * x * y$$

Sympy Example of trying to differentiate with respect to an expression not just a variable.

[22]:
```
from sympy.abc import t

F = Function('F')
f = Function('f')
U = f(t)
V = U.diff(t)

direct = F(t, U, V).diff(U); direct
```

[22]:

$$\frac{\partial}{\partial \xi_2} F\left(t, \xi_2, \frac{d}{dt} f(t)\right)\Big|_{\xi_2=f(t)}$$

[23]:
```
F(t,U,V)
```

[23]:

$$F\left(t, f(t), \frac{d}{dt} f(t)\right)$$

[24]:
```
F(t,U,V).subs(U,x)
```
